

## JVT1521

**Metal Axial Expansion Joint  
General Purpose Duty  
Stainless Steel Bellows  
PN16 Flanged**

The JVT1521 metal axial expansion joint helps to alleviate stress in systems by absorbing longitudinal expansion and compression in pipework.

### Features & Benefits

- Suitable for a wide range of applications
- Horizontal or vertical position
- External protection
- Internal liner

### Pressure & Temperature

Pressure range:-  
16 bar  
(see graph below)  
Temperature range:-  
-20°C to 300°C

SIZE	25	32	40	50	65	80	100	125	150	200	250
L	105	105	120	150	140	155	220	190	270	275	285

### Pressure / Temperature Graph

### MATERIALS

Flanges	Steel (37.2)
Bellows	Stainless Steel (AISI 321)
Liner	Stainless Steel (AISI 321)

The following considerations should be noted during installation :

- The route of the pipeline is straight.
- The fixes points are dimensioned so that they can absorb the reaction forces and stiffness rate that arise during use.
- The pipeline is limited by fixed points.
- Check that the expansion joint is not subjected to the weight of the pipeline.
- Sagging is prevented by using fixed or loose bearings.
- The distance between expansion joint and the 1<sup>st</sup> bearing may be a maximum of 4 times the pipe diameter. The distance between the 1<sup>st</sup> and the 2<sup>nd</sup> bearing may be a maximum of 14 times the pipe diameter. The distance between the remaining bearings may be a maximum of 21 times the pipe diameter. The distance may be reduced where this is required for the inherent stability of the pipe.

### Example Layout
